

— CLOUD & AI AS A SERVICE · ON YOUR OWN INFRASTRUCTURE

Start earning on quality **cloud and AI services** — without heavy spend or your team's time.

Cozystack is a **ready public-cloud platform**: backend, billing and a self-service panel, 20+ managed services, S3, GPU and AI. Start with three machines and grow the cluster as load grows. Production in two weeks.

2 weeks To production: install, configure, migrate	20+ Managed services out of the box to sell	from 3 nodes Physical or virtual	\$0 Per-core licenses — open source, CNCF

01 A ready public-cloud business

You don't build the platform — you turn it on, put your brand on it, and sell. Everything between a customer signing up and paying for services is already there.

• Ready backend

The full self-service spine — from organization sign-up to provisioning and service payment.

- Org & user onboarding
- Tenant isolation by design
- Usage metering & telemetry

• Ready billing

Metered, pay-as-you-go billing built in — charge for exactly what each tenant uses.

- Per-resource accounting
- Quotas & plans
- WHMCS integration ready

• Ready panel

A self-service portal: customers order, scale and manage services themselves.

- Full lifecycle self-service
- White-label, your brand
- Dashboard + API

02 Easy start — grow with the load

No large server fleet or team needed upfront. Take three machines, deploy Cozystack — and expand the cluster whenever you want.

1

Three machines

Take three virtual or physical machines — enough to stand up the platform.

2

Deploy Cozystack

Roll out the platform — a cloud with services, billing and panel already running in production.

3

Grow as you go

Add new nodes — bare-metal or virtual — at any time, as you migrate workloads. No downtime.

03 What to sell — a catalog from day one

Each service is ordered in a few clicks: the platform provisions, keeps it highly available, backs it up and monitors it. You set the price.

• Managed Kubernetes Tenant clusters, GPU sharing	• Virtual Machines KubeVirt · Windows · GPU	• VM Disks Replicated block storage	• S3 Object Storage S3-compatible buckets	• GPU as a Service Pool, inference, passthrough
• PostgreSQL HA, backups, PITR	• MySQL / MariaDB Managed, replicated	• ClickHouse Analytics warehouse	• Redis In-memory cache/store	• Kafka Event streaming
• RabbitMQ Message broker	• NATS Lightweight messaging	• FerretDB / Mongo Document database	• FoundationDB Distributed KV	• Qdrant Vector DB for AI
• Harbor Registry + scanning	• VPN Managed tenant VPN	• TCP Load Balancer Public exposure	• HTTP Cache Nginx edge caching	• Monitoring Metrics, logs, dashboards

And your own catalog. Any application can be packaged as a managed service — add bespoke offerings and sell them the same way.

04 AI services — your highest-margin product

Cozystack turns your hardware into a ready AI platform and keeps the data in your jurisdiction, where local AI demand actually wants it.

• GPU as a Service Sell GPU power by the card or sliced across tenants — pooled, passthrough, fractional. – Whole-GPU passthrough – GPU pooling & sharing – Per-tenant isolation	• Model & LLM inference Serve AI models out of the box: customers pick a model and run inference — a ready AI-as-a-Service under your brand. – One-click serving – Scales to your GPU fleet – OpenAI-compatible API	• Vector DB & RAG Managed Qdrant for embeddings — the backbone of the AI and RAG apps your customers build. – Managed vector storage – Pairs with inference – Sell the full AI stack
--	---	--

05 Resilience & backups

Uptime and recoverability are premium SLAs you can charge for. Cozystack ships the hard parts in the box.

• Multi-DC, fault-tolerant

Stretch the platform across datacenters and survive a full site outage.

- Cross-DC storage replication
- Quorum across sites
- Active-active & DR designs

• Advanced backups

Scheduled, incremental backups with point-in-time recovery, plus VM and volume snapshots.

- Database PITR
- VM & volume snapshots
- S3 offload · cluster DR

• HA by default

Odd-quorum control plane, self-healing workloads, replicated storage.

- Self-healing by design
- Redundant storage
- No single point of failure

06 Migration, integration, deployment

Cozystack fits the business you already run — and gives you a clean exit from legacy virtualization.

Billing & panel integration

WHMCS is ready. Different panel? We integrate it for you or train your team.

WHMCS — ready

Proxmox

Deploy where it suits you

In virtual machines or directly on bare metal. Your hardware, your datacenter — no hyperscaler dependency.

Bare metal

Virtual machines

Air-gapped

07 Simpler than OpenStack — modern by default

THE OLD WAY

- × OpenStack: huge operational surface, dozens of moving parts
- × VMware / Broadcom: per-core licensing eating your margin
- × A large, expensive team just to keep the lights on
- × Months of integration before the first revenue

WITH COZYSTACK

- ✓ One coherent Kubernetes-native platform — far less to operate
- ✓ Zero license fees — pay for expertise & support
- ✓ Start without a big team or deep Kubernetes skills
- ✓ Production in ~2 weeks, then iterate while already earning

Real open source — a CNCF project, no vendor lock

Ænix doesn't just package Cozystack — our team contributes upstream to the technologies it stands on. You stand on a community-owned foundation. And we hand over the knowledge: hands-on enablement and our own training courses.
